

Inference Release Candidate 6: Great New Features and Extended Trial Period

October 23, 2008

New Features for RC6:

- Insert and Edit menu item for Code Blocks and Expressions
- Keyboard Shortcuts for common code editing, parts container, and export functions
- Ability to manually specify the installation location for R and MATLAB
- Streamlined Getting Started workflow (no more Getting Started Wizard)
- Updated and expanded Getting Started documentation
- Direct editing of Expression code in Outputs section of Inference in Excel
- Streamlined download of Sample Documents in Inference Online
- Configuration of Scripting Platforms is no longer required

Important Bug Fixes:

- Improved whitespace formatting for results document output
- Missing code editor textbox for Expression Editor fixed
- 36 other minor bug fixes

Other Important Notes:

Installation of R DCOM object is no longer required (thus greatly simplifying the installation process for Inference for R). Additionally, this is the last release candidate of Inference for R. Subsequent releases will be commercial releases, starting in early February 2009. By installing Release Candidate 6, you'll automatically renew your fully functional trial of Inference for R. We've extended the trial duration to 120 days to accommodate users until the commercial release is available.
