

**Header and Footer Output**

Inference can print Expression output to the header and footer regions of Microsoft Excel documents. To print output to headers and footers:

1. Create an Expression.
2. Enter a Label for the Expression.
3. In a header or footer, type the Label of the Expression (enclosed in greater than/less than brackets). For example: **<MyHeader>**

When the document is executed, the bracketed Expression label placeholders will be replaced with the actual code output from the Expression.

**Expression for Header (with Output Result = No):**

**Expression for Footer (with Output Result = Yes):**
